

Relevant information

Medellín, July 18, 2019

EPM would like to clarify that the General Comptroller of the Republic has not issued the Final Report on the exceptional inspection of the Ituango Hydroelectric Project. Once this report is issued, we will make a statement and clarify, if applicable, the statements by the Governor on the item lost profits and loss of project value.

In addition, we cannot forget that a BOOMT contract was signed between HIDROITUANGO S.A. E.S.P. and EPM E.S.P. in which the parties divided the Hydroelectric Power Plant's construction and operating risks. Accordingly, each one shall be liable for the risks assumed.

To date, EPM has informed public opinion and the regulatory agency that it is working toward startup of plant commercial operations in December 2021.
