

EPM modifies date of receipt of tenders for the construction of final civil works of Hidroituango

By addendum No. 6, EPM modified the closing date for the receipt of bids from the CRW 167467 public application process, whose purpose is the construction of final civil works of the Ituango Hydroelectric Project, which was scheduled for August 17. This deadline was extended until October 14, 2022, at 4:00 p.m.

Potential interested bidders, insurers and insurance brokers have held different informative meetings with EPM and have visited the Hidroituango works on several occasions. As a result of the above, they submitted a series of requests for clarification, which is why the Company has decided to extend the deadline for receipt of offers to give the respective responses.

This addendum does not alter the dates that have been reported for the entry into operation of the new generation plant.

Addendum No. 6 containing this modification will be sent by the ARIBA EPM contracting system to potential bidders who are participating in this process and will be published on the Te Cuento portal on the EPM website www.epm.com.co
