

EPM informs the public opinion:

That at the request of some of the potential bidders that participate in the process of public request for bids, CRW 256463, whose purpose is the construction of final civil works for the entry into commercial operation of generation units 5 to 8 of the Ituango Hydroelectric Project, the closing date for the reception of offers scheduled for June 28, 2023, was modified. Said term was extended by fifteen (15) calendar days and therefore the reception of offers will be until July 13, 2023, at 4:00 p.m. Addendum No. 2 containing this modification will be sent by EPM's ARIBA contracting system to potential bidders who are participating in this process and will be published on the Te Cuento portal on the EPM website www.epm.com.co

It is important to highlight that the displacement of the schedules of the contracting process does not affect the dates of entry into commercial operation of the generation units in the southern zone (5 to 8).
