

Relevant Information

EPM informs that in compliance with the preventive evacuation ordered by Resolution 1056 of 2022 issued by the National Unit for Disaster Risk Management -UNGRD-, it successfully carried out synchronization tests with load rejection at maximum power reached in units 1 and 2 of the Ituango project. According to the result of the monitored variables, it is evident that the project is safe and reliable and with this the generation of energy from the plant is enabled in a constant and permanent manner.
