

### EPM announces date of entry into operation of the first two Hidroituango turbines

**Medellín, Tuesday, July 26, 2022,** EPM will put Hidroituango's first power generation unit into commercial operation on October 15 and the second unit on October 20. In this way, EPM maintains the commitments acquired with the Energy and Gas Regulation Commission -CREG- and with the Country to put its first two units into commercial operation before November 30, 2022.

This schedule considers the critical path of the different work fronts and the works of high technical complexity that are being carried out in Hidroituango, which have no precedent in Colombia. These works include the installation of metal shields (ferrules) in the intake tunnels that lead water from the reservoir to the generation units and underwater work to fine-tune the water intake system.

#### DRY TESTING

Within the schedule of the commissioning of Hidroituango, the start of dry tests is a historic advance that was made this Tuesday, July 26.
