

## **Attachment – Relevant Information**

EPM informs:

1. The works of the Ituango hydroelectric project, which is currently being built in Northwestern Antioquia, are advancing as scheduled and within budget; it will start operations in December of 2018. This project, already at 66% works completion, is an example of integration with its influence area that brings development and quality of life to the community.

2. As it is widely known, the major civil works of Ituango hydroelectric project are being built by the CCC Ituango consortium made up by Brazilian company Camargo Correa and Colombian firms Concreto and Coninsa-Ramón H. The contract awarded to this consortium is the result of an international public bidding in which multiple bidders took part and which was overseen by the Attorney General Office.

3. The company is ruled by a policy of zero tolerance to fraud, corruption and bribery and its management model is based on socially responsible principles, guidelines and goals. Accordingly, the organization rejects anything straying from the law and ethics and the utmost purpose of community service.

4. According to its vocation of service, openness and transparency, the organization has made available, and will make available to the authorities, all the information necessary about this process and any relationship with CCC Ituango consortium and other works in which Camargo Correa has taken part. Likewise, it is ready to collaborate with competent authorities in anything they may require.
