

EPM won the tender for the construction, operation, and maintenance of a transformation bay at the Nueva Esperanza substation.

- The works scheduled to start operations in June 2026 will be carried out in the municipality of Soacha, Cundinamarca.

The Mining and Energy Planning Unit (UPME, for the Spanish original), attached to the Ministry of Mines and Energy, awarded EPM the design, procurement of supplies, construction, operation and maintenance of a 500 kilovolt (kV) transformer bay for a 450 megavolt-ampere (MVA) 500/115 kV transformer at the Nueva Esperanza substation this Thursday, April 11, through a public call for bids.

The project is part of the 2020-2034 Reference Generation-Transmission Expansion Plan of the Colombian Ministry of Mines and Energy.

"This project will contribute to the development of the department of Cundinamarca and the well-being of its inhabitants, since it will improve the energy distribution network, increasing the capacity to meet the growth in energy demand in the area," said John Maya Salazar, CEO of EPM.

With this project, EPM continues to contribute to the growth of energy transmission services and make populations feasible for developing the different users of the National Interconnected System (SIN). This is how it contributes to the harmony of life for a better world.
